## CENTRAL INTELLIGENCE AGENCY

-2-

7.	In the whole area of the bay, there are sixteen anti-aircraft and/or searchlight positions. All guns observed were medium or small caliber; some were ex-German. Tent living quarters and surface telephone lines give the sites a temporary appearance.	•
8.	A new barracks on the hill above Sevastopol contains an armored formation having 200-250 Sherman tanks and German armored cars, which arrived in October 1947.	50X1-HUM
9.	PW labor for the Sevastopol area is supplied by camps 3318. 7241/12, and 7241/5, housed in and round the ruined Admiralty Palace The PWs are supervised by MVD Guard Regiment 317 K.	50X1-HUM
	Air	
LO.	Nine twin-engined recommissance flying-boats are stationed at the flying-boat base They are believed to be of American origin.	50X1-HUM
u.	On the landing ground north of the bay are stationed only three biplanes.	50X1-HUM
L2.	A large new airfield is under construction about 2 km north of Bilbek. In November 1947, the levelling of the landing area was nearing completion.	
	Trade and Communications	
<b>13</b> .	All railway communication from Sevastopol goes through Simferopol, to which the line is single-track. From Sevastopol there are two passenger trains to Moscow daily. Average freight traffic daily each way is six trains of 60 - 80 axies each, loading mainly stone and scrap and dischargimainly coal, timber, and limestone.	ng
14.	The road to Simferopol is in good condition. The whole bay is encircled by a first-class motor road on the edge of the plateau, which crosses a long narrow wooden bridge gwarded by two sontries at Inkerman.	
<b>1</b> 5.	Considering that the whole economy of Sevastopol is orientated seaward, very few small craft ply inside the bay, and few are being built to remedy the shortage.	
16,	Passenger traffic by sea is confined to a twice-weekly service to Odessa a Batum, run by the S.S. "Ukraine" and "Viktoria", which berth at the coaling quay	50X1-HUM
17.	No fishing is done from Sevastopol Bay.	
<b>1</b> 8。	About one oil tanker per month berths at the oiling quay (23), where there are four bombod-out storage tanks above ground and a number of new underground ones in use.	
19.	Cargo traffic is very slight. The morcantile harbor never important, is almost described. Its quays are mainly useable.	• 50X1-HUM
	Electric Power	
20.	Current is supplied to the Sevastopol area by two power stations. The larger feeds the town and everything south of the bay. It is equipped with generators dismantled from Elbing (East Prussia), which are said to be working to 75% of their former capacity. The fuel used is Donetz coal. The power station buildings are camouflaged.	
21.	The smaller power station supplies everything north of the bay. It burns oil in ex-German AEG generators.	50X1-HUM
